

# Securely Make Off-chain, Real-Time Data Available to Smart Contracts.

An off-chain compute infrastructure serving as an open, decentralized protocol that sits in between the blockchain and smart devices to convert real-world data from devices into verifiable, dApp-ready proofs.

## A New World of Possibilities in Device Data Management.

Setting up a W3bstream node allows you to do computations with data off chain and have it interact with your Dapp. Being able to communicate directly with devices and move data from place A to place B.

[w3bstream.com](https://w3bstream.com)

**Setting a W3bstream node is easy and can be done in less than an hour.**

```
$curl https://w3bstream.com/  
dc > docker-compose.yaml &&  
docker-compose up -d
```

Paste this in a Linux/macOS/WSL(Windows) terminal.
